Windows Installation	3
MAC Installation	7

Installation Steps

Windows Installation

Step 1:

Download the Anaconda installer through navigating to Official download site:
<https://www.anaconda.com/products/individual#windows>

Make sure to download 64 or 32 bit depends on your Windows OS bit. For example, if you have windows 10 then download 64 bit and if you still use windows 7, then preferably 32 bit.

Note: The software is about 400-466 MB of size and it may take about 10 to 60 minutes download time depends on your internet speed.

Step 2:

Double click the installer to launch. As an alternate to prevent permission errors, right click and run as administrator

If you encounter issues during installation, temporarily disable your anti-virus software during install, then re-enable it after the installation concludes. If you installed for all users, uninstall Anaconda and re-install it for your user only and try again.

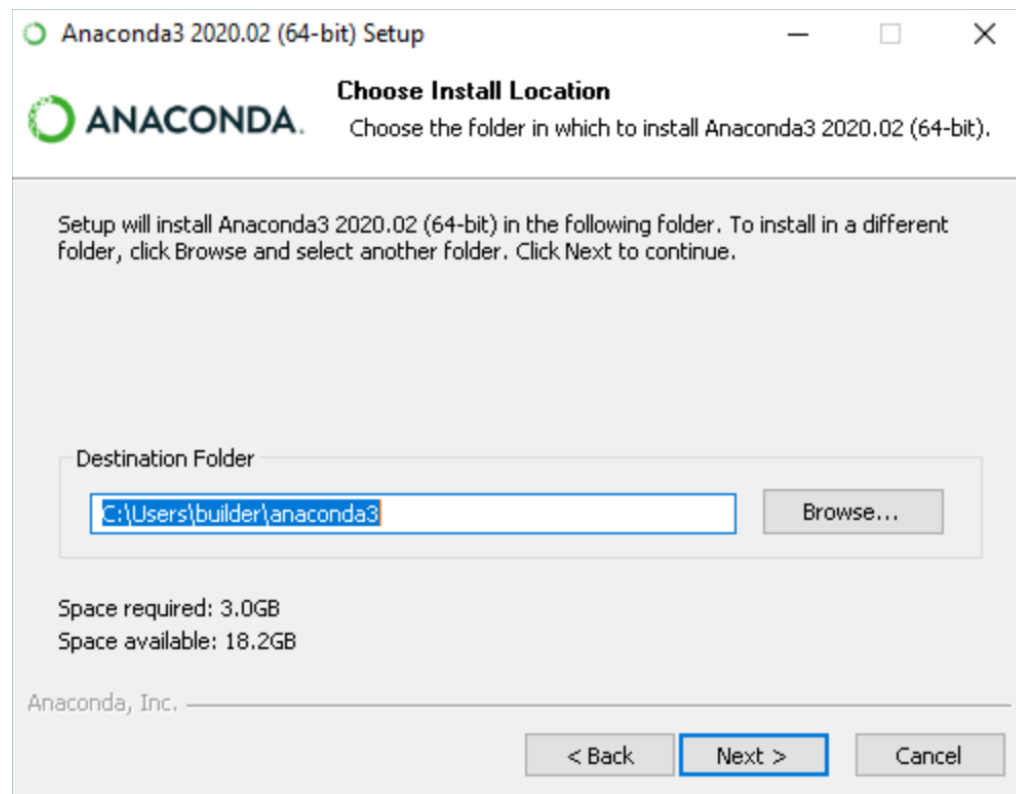

Step 3: Click Next.

Step 4: Read the licensing terms and click “I Agree”.

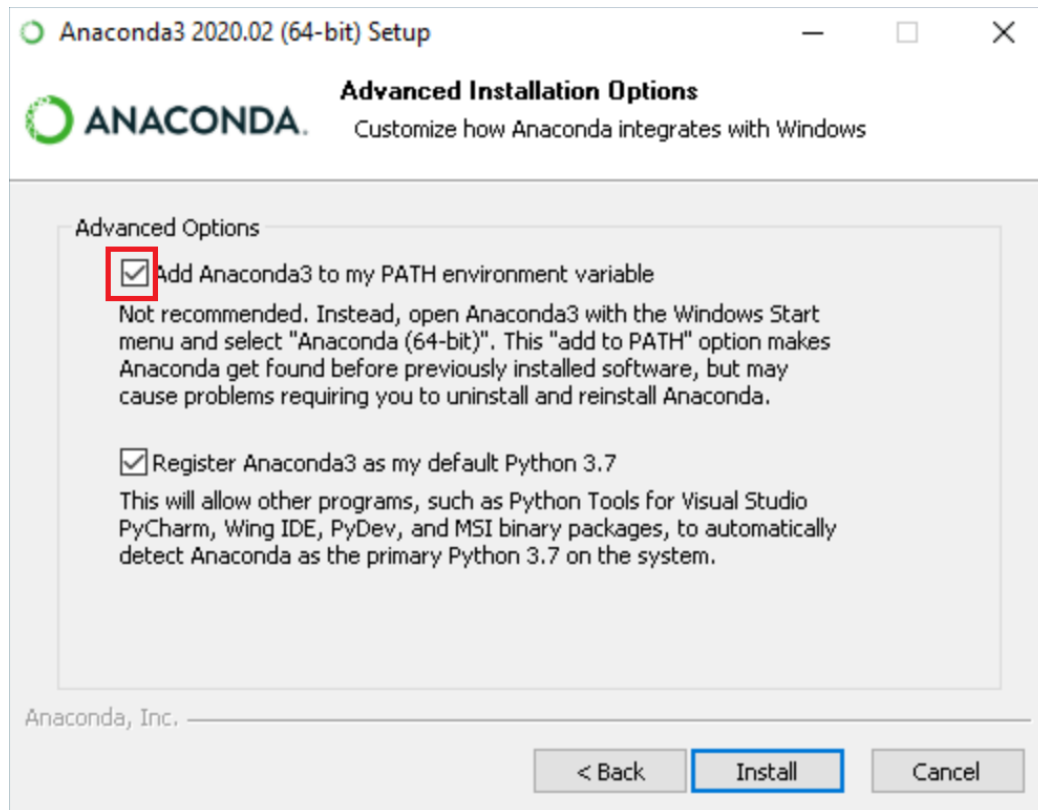

Step 5: Select an install for “Just Me” unless you’re installing for all users (which requires Windows Administrator privileges) and click Next.

Step 6: Select a destination folder to install Anaconda and click the Next button.

Note: Install Anaconda to a directory path that does not contain spaces or unicode characters.

Step 6: Choose Add Anaconda to your PATH environment variable.

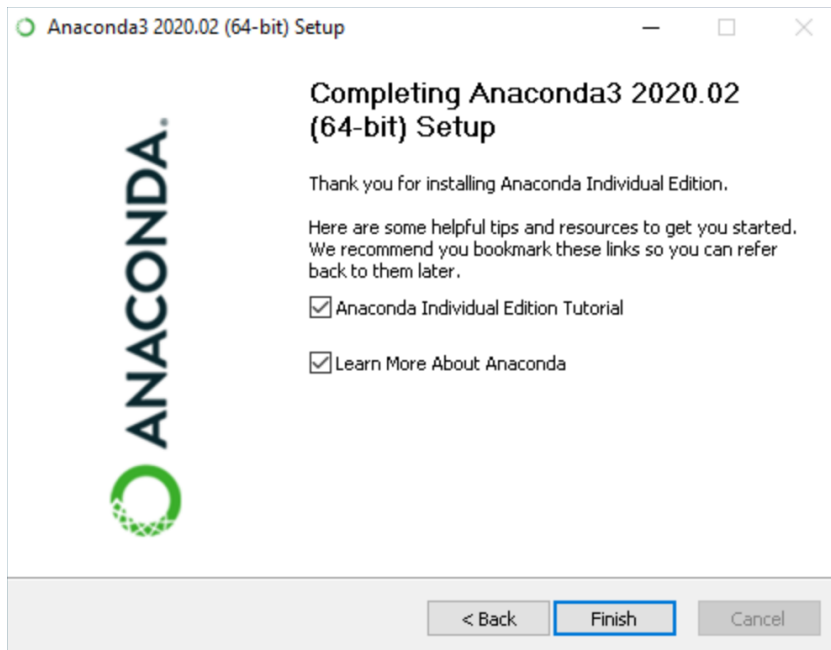

Step 7: Choose whether to register Anaconda as your default Python. Unless you plan on installing and running multiple versions of Anaconda or multiple versions of Python, accept the default and leave this box checked.

Step 8: Click the Install button. If you want to watch the packages Anaconda is installing, click Show Details.

Step 9: Click the Next button.

Step 10: Click the Next button [Skip to install Pycharm].

Step 11: After a successful installation you will see the “Thanks for installing Anaconda” dialog box:

If you are behind a company proxy, you may need to do some additional set up. See how to set up your proxy on this link:
<https://docs.anaconda.com/anaconda/user-guide/tasks/proxy/>

MAC Installation

Step 1:

Download the Anaconda installer through navigating to Official download site:

<https://www.anaconda.com/products/individual#mac>

Note: Use Graphical Installer

Step 2:

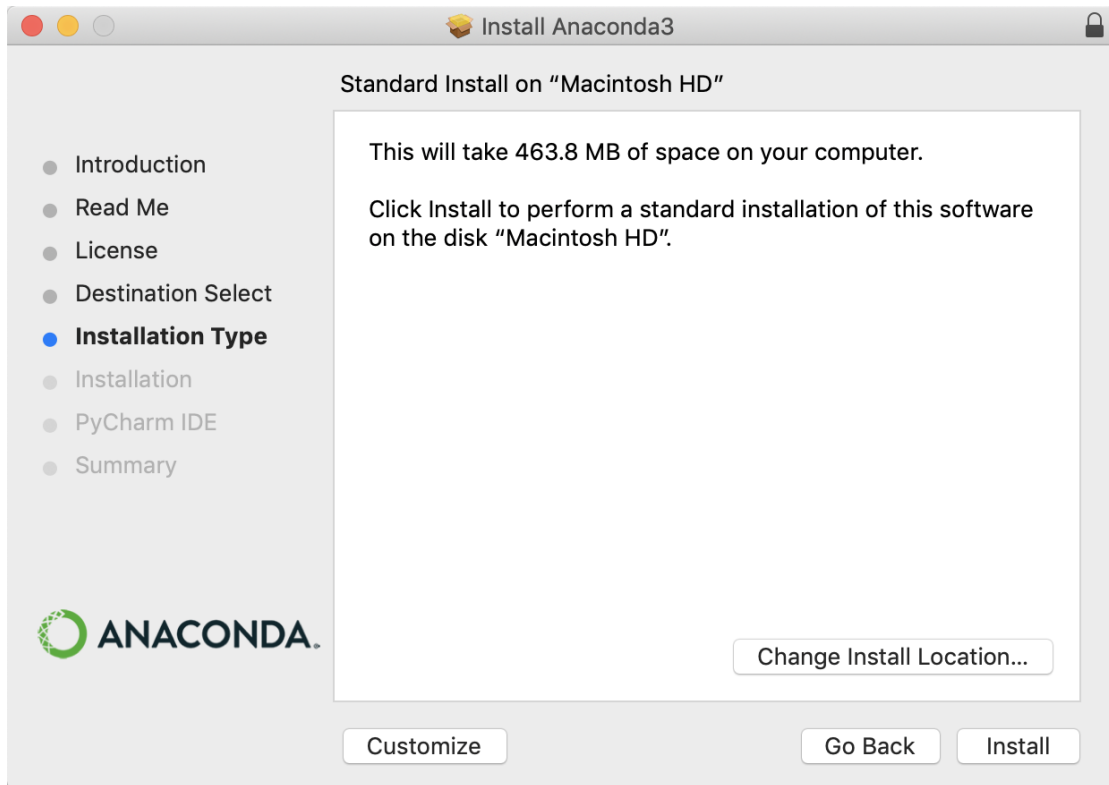

Double-click the downloaded file and click continue to start the installation.

Step 3:

Answer the prompts on the Introduction, Read Me, and License screens.

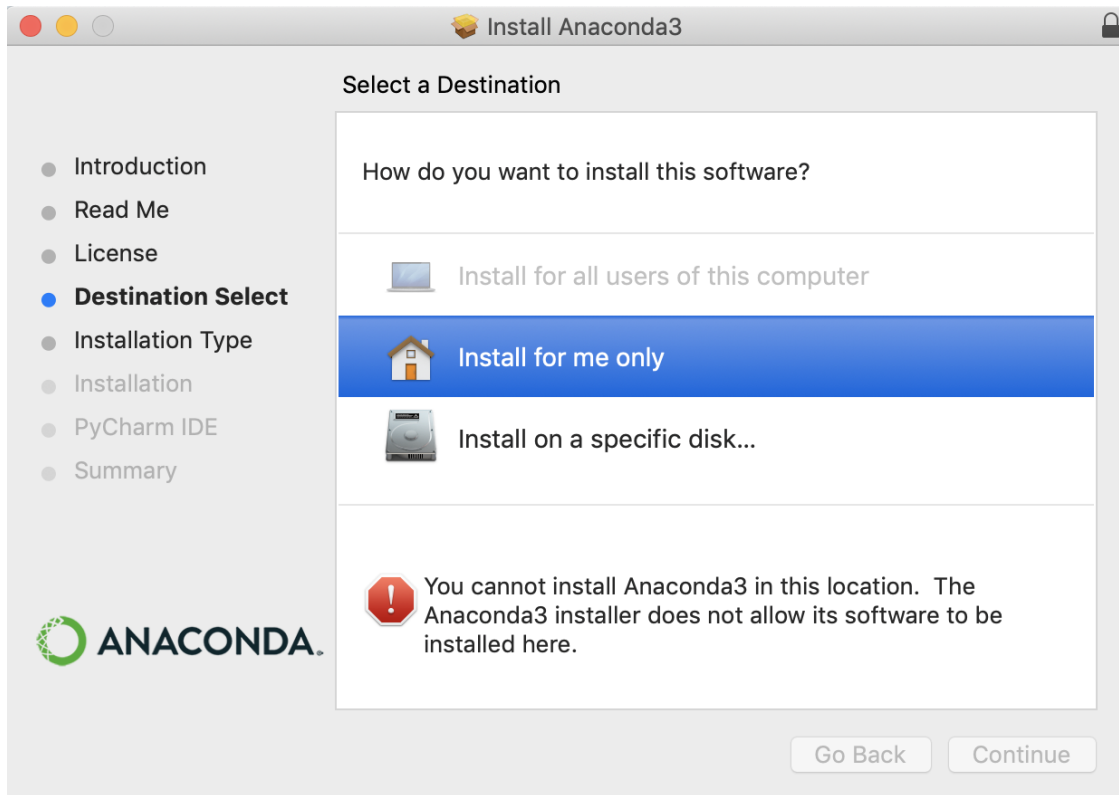

Step 4:

Click the Install button to install Anaconda in your ~/opt directory (recommended):

Step 5:

OR, click the Change Install Location button to install in another location (not recommended). On the Destination Select screen, select Install for me only.

Step 6:

Click the continue button.

Step 7:

To install Anaconda without PyCharm, click the Continue button.

Step 8:

A successful installation displays the following screen:
